Why CyberPower? 5 Good Reasons.

1. Up to 3 years advanced replacement warranties across Australia – free courier both ways.
2. FREE unlimited technical support
3. Free Shutdown software included with all UPS units
4. Original Manufacturer with dedicated R&D
5. Very competitive pricing. Bid Pricing is available on project opportunities.

What is UPS?

UPS = Uninterruptible Power Supply

An electrical device that provides emergency power to a load when the input power source, typically the utility mains, fails.

A UPS is typically used to protect computers, data centres, telecommunication equipment or other electrical devices where an unexpected power disruption could cause injuries, fatalities, serious business disruption and/or data loss.

Application:

Personal/Home:

PC, Entertainment Devices, Lightings, Home Appliances...

Enterprise/Business:

Mainframe Servers, Data Centres, Telecom, Factories, Hospitals, Security Systems, Traffic Management Systems...

Why do I need a UPS?

- In case of a blackout, the UPS switches immediately over to battery power to provide a continuous power source for the length of the battery.
- The battery backup gives you time to power down sensitive equipment, servers, or even video game consoles without loss of data or progress.
- You can keep your business up and running during power outages – this can save you thousands of dollars.

How big does my UPS need to be?

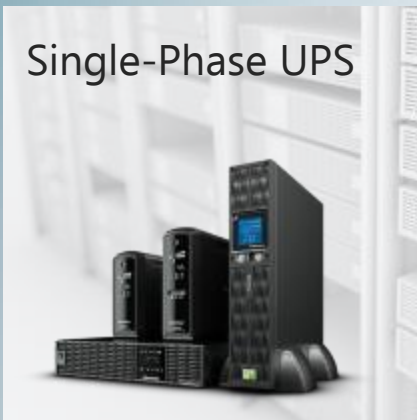

To identify the load, make an equipment list, including total watts each piece of equipment requires to run properly.

EXAMPLE EQUIPMENT LIST TO VERIFY THE LOAD			
DESKTOP LIST		SERVER ROOM LIST	
PC	120W	Server #1	960W
			
Monitor	60W	Server #2	700W
			
External Drive	20W	Switch	250W
			
Wireless Router	10W	Storage Device	480W
			
Total Required Capacity	210W	Total Required Capacity	2390W

Datacentre UPS (3-Phase)

[Home](#)[Office](#)[Datacenter](#)

Achieve N+X Power Redundancy for Enterprise Applications

Perfect for enterprise and mission-critical applications, the 3-phase UPS adopts double-conversion topology to guarantee seamless pure sine wave output. The UPS features dual inputs and is compatible with generators to ensure power continuity. Its N+X redundancy design enables vertical/horizontal expansion to achieve higher capacity and avoid single point of failure.

Product Series

- Online S (3-in/1-out)
- Modular UPS (3-in/3-out)
- HSTP33 (3-in/3-out)

PDU & ATS

[Home](#)[Office](#)[Datacenter](#)

Diversified Power Distribution for Datacenter Environment

The PDU Series provides advanced power control and monitoring, guaranteeing the most flexible power distribution solution. The ATS PDU Series features dual power inputs, providing reliable redundant power solutions. Both series are ideal for data centre applications.
